                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Anol; Stress condition II library, constructed by John Davies and Jeffrey McDermott, combines CDNAs from CC-1690 cells grown to mid-log phase in TAP (NH4+ - containing) and shifted to TAP - NO3- (24hrs); H2 production conditions (0, 12hr, 24hr) see Melis et al., (2000) Plant Phys. 122: 127-135; TAP + H202 (1, 12, 24 hr); TAP + sorbitol (1, 2, 6, 24 hr); TAP + GOLYA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda synthesized. The cDNA was directionally cloned into lambda synthesized. The cDNA was directionally cloned into lambda sap II (Stratagene) in the EcoRI (5') and XhoRI (3') sites. pBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with ExAssist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al., (1996) Genome Research 6: 791-806."

//clone lib="Cory, Vector: pDNR, Site 1: Sfil; CB44 is a cDNA library of Vitis Vinifera cv.
//cabernet Sauvignon' Clone B berries. Sampled berries were
collected from field-grown vines during stage II of berry
growth (berries were green and hard) at approximately 60
days after full bloom. The average berry size was 9
milimeters. Sampled vines were located at the University
of California, Davis, Experimental Vineyard. CDNAs were
made by oligo-dT priming and directionally cloned. 5'and
3' adaptors were used in cloning as follows:
5'-ARTCTAGAGGCCGAGGCGAGAGTGGCCATTACGGCCGG-3' and
constructed using the Clontech Creator SMART kit and
size-selected to contain the 0.5-3 kb size fraction."

8 berries Samples were collected at veraison (transition
between stage II and stage III of berry growth) from
field-grown vines 60 days after full bloom. Berries were
still green but soft. Sampled vines were located at the
University of California, Davis, experimental vineyard.
CDNAs were made by oligo-dT priming and directionally
cloned. 5'and 3' adaptors were used in cloning as follows:
5'-ANGCAGTGGTATCAACGCAGAGTGGCCATTACGGCCGGG-3' and
5'-AAGCAGTGGTATCAACGCAGAGTGGCCATTACGGCCGGG-3'
Sonstructed using the Clontech Creator SMART kit and
size-selected to contain the 0.5-3 kb size fraction."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
